Project Name

Streamlining IT Procurement: Automating Standard Laptop order with flow designer

Maximum Marks

2 Marks

Customer Problem Statement Template:

The project addresses the manual effort involved in creating and assigning configuration tasks for approved Standard Laptop requests. Users submit laptop requests through the Service Catalog, but the required configuration task needs to be automatically created and routed to the Hardware team after the configured approval condition is reached.

Problem Statement (PS)

I am (Customer):

A user requesting a Standard Laptop through the Service Catalog.

I'm trying to:

Submit a Standard Laptop request and have the required laptop configuration process handled efficiently.

But:

The required configuration task needs to be created and assigned after the request reaches the configured approval condition.

Because:

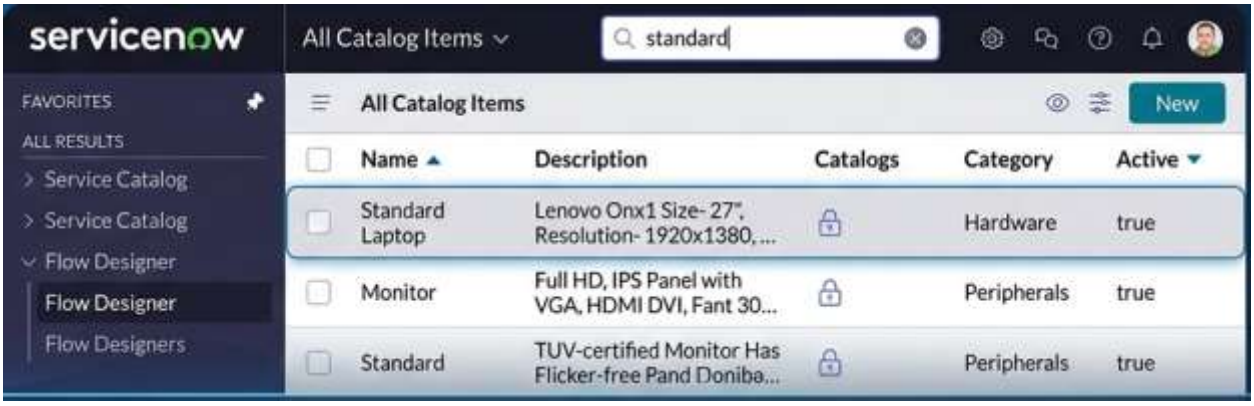

Manual task creation and routing can increase processing time and manual overhead.

Which makes me feel:

Delayed while waiting for the laptop configuration process to be completed.

PS-1

I am a user requesting a Standard Laptop through the Service Catalog. I'm trying to have my approved laptop request processed efficiently, but the required configuration task must be created and assigned after the configured approval condition. Because manual task creation and routing can increase processing time and manual overhead, which makes me feel delayed while waiting for the laptop configuration process to be completed.

PS-2

I am a user requesting a Standard Laptop through the Service Catalog. I'm trying to receive timely laptop configuration, but the configuration task needs to be created under the related Requested Item and assigned to the Hardware team after approval. Because this process can require manual task creation and assignment, which makes me feel delayed in receiving the required laptop configuration.
