SCENARIO

Requesting, approving, ordering, and receiving a standard laptop through an automated workflow

	1 Entice				2 Enter				3 Engage				4 Exit			5 Extend		
	How does someone initially become aware of this process?				What do people experience as they begin the process?				In the core moments in the process, what happens?				What do people typically experience as the process finishes?			What happens after the experience is over?		
1 Steps What does the person (or group) typically experience?	**New need identified** A new hire, a broken device, or a refresh cycle creates the need for a standard laptop	**Check eligibility** Requester checks which laptop model they qualify for based on their role	**Open IT portal** Requester opens the IT service portal and finds the Laptop Request form	**Choose standard model** Requester picks from the approved catalog (e.g. Standard, Developer, Ultralight)	**Fill in request form** Requester enters name, department, cost center, delivery location and needed-by date	**Submit request** The request is submitted and the FlowDesigner workflow starts automatically	**Auto-validation** FlowDesigner checks eligibility, budget code and catalog price with no manual review	**Confirmation sent** Requester gets a ticket number and an expected delivery timeline	**Manager approval** Manager receives a one-click approve / reject card in email or Teams	**Purchase order created** On approval, a PO is generated and sent to the preferred vendor automatically	**Vendor fulfillment** Vendor confirms stock, ships the device and returns tracking details to the workflow	**Tagging & imaging** IT registers the asset tag and enrolls the device with the standard build	**Laptop delivered** Courier or IT delivers the laptop to the employee's desk or home	**Confirm receipt** Employee confirms receipt in one click and the ticket closes automatically	**Setup & handover** Employee signs in, completes setup, and IT closes the onboarding checklist	**Asset record updated** Asset inventory is updated with owner, warranty and lifecycle dates	**Feedback survey** A 2-question survey goes out three days after delivery	**Review & refresh planning** Procurement reviews cycle time and spend, and plans bulk orders and refreshes
Interactions What interactions do they have at each step along the way?	Email from HR or manager, or a broken-device ticket People: manager, HR	IT policy page on the intranet Places: office or remote	IT service portal (website) or Teams bot Things: laptop, browser	Catalog page in the IT portal Things: model specs and price list	Request form in the IT portal People: none, fully self-service	Submit button triggers FlowDesigner Things: portal, FlowDesigner	FlowDesigner runs in the background Things: budget and HR lookups via ERP	Email or Teams notification Things: ticket number link	Manager approves via Outlook or Teams adaptive card People: manager	FlowDesigner connects to ERP / procurement system and vendor API Things: PO document	Vendor portal or API, carrier tracking page People: vendor rep (only on exceptions)	IT staff, MDM tool (e.g. Intune), asset tag labels Places: IT staging room	Courier or IT desk hand-off People: courier, IT support, employee	Link in email or portal ticket Things: portal	IT support staff, physical laptop, setup guide Places: office or remote via video call	Asset inventory / CMDB tool Things: asset database	Survey link in email Things: email	FlowDesigner dashboard and BI reports People: procurement team, IT manager
Goals & motivations At each step, what is a person's primary goal or motivation? ("Help me..." or "Help me avoid...")	Help me get a working laptop without chasing people	Help me know what I am allowed to order	Help me find the right request form fast	Help me pick the right standard model without guessing	Help me avoid filling in the same details twice	Help me trust that my request went through	Help me avoid errors that delay my order	Help me know what happens next and when	Help me approve quickly without leaving my inbox	Help me avoid manual PO paperwork	Help me know my laptop is on its way	Help me make sure every device is secure and tracked	Help me receive the laptop when I need it	Help me close this out with no extra forms	Help me start working on day one	Help me keep records accurate with no manual entry	Help me tell IT how it went	Help me spot delays and savings across all orders
Positive moments What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?		Clear eligibility rules remove guesswork		Pre-approved catalog makes choosing simple	Form pre-fills name, department and cost center from HR data	Instant ticket number gives peace of mind	Standard orders skip manual checks and take minutes, not days		One-click approval from email or Teams Approvals take hours instead of days	No re-keying of data into the procurement system	Live tracking updates arrive without anyone asking		Delivery matches the date promised in the ticket	Auto-closing ticket means no follow-up forms	Laptop arrives pre-imaged and ready to use	Asset records stay accurate with zero data entry		Dashboards make delays and spend visible in one place
Negative moments What steps does a typical person find frustrating, confusing, angering, costly, or time-consuming?	Employees often do not know a standard request process exists	Eligibility rules are hard to find or out of date		Too many options can lead to ordering the wrong model	Missing cost center codes cause rejections later		Non-standard requests get stuck in validation		Managers on leave leave requests waiting Reminders can feel like spam		Vendor stock-outs or delays are not always visible early	Imaging queue creates a bottleneck at busy times	Failed deliveries to remote workers cause delays		Setup problems still need an IT person to step in		Low survey response rates limit insight	
Areas of opportunity How might we make each step better? What ideas do we have? What have others suggested?	How might we trigger a request automatically from the HR onboarding record?	Show only the models a person qualifies for after login	Add a Teams bot so people can start a request in chat	Offer a side-by-side model comparison	Pre-fill everything we already know, so users only confirm		Route exceptions to a human with the reason attached		Auto-escalate to a delegate if no response in 24 hours	Combine orders into bulk POs for volume discounts	Send proactive delay alerts with a new ETA	Pre-image popular builds to cut staging time	Offer pickup lockers or home delivery with tracking		Include a QR-code setup guide in the box	Auto-schedule the next refresh and warranty reminders		Use cycle-time data to forecast demand and stock

Customer journey map: Streamlining IT Procurement | Scope: standard laptop orders only (non-standard hardware and software requests are out of scope).
