Project Design Phase

Solution Architecture

Date	3.10.2026
Team ID	6ab8c3ef30f9767f87730407
Project Name	Streamlining IT Procurement: Automating Standard Laptop order with flow designer
Maximum Marks	[TO BE FILLED]

Solution Architecture:

The Standard Laptop Task Flow automates the creation and assignment of configuration tasks for approved laptop requests. After the request meets the approval condition, Flow Designer creates a Catalog Task under the related Requested Item and assigns it to the Hardware team.

Purpose: To minimize manual task creation, speed up request processing, and automatically route approved laptop requests to the correct team.

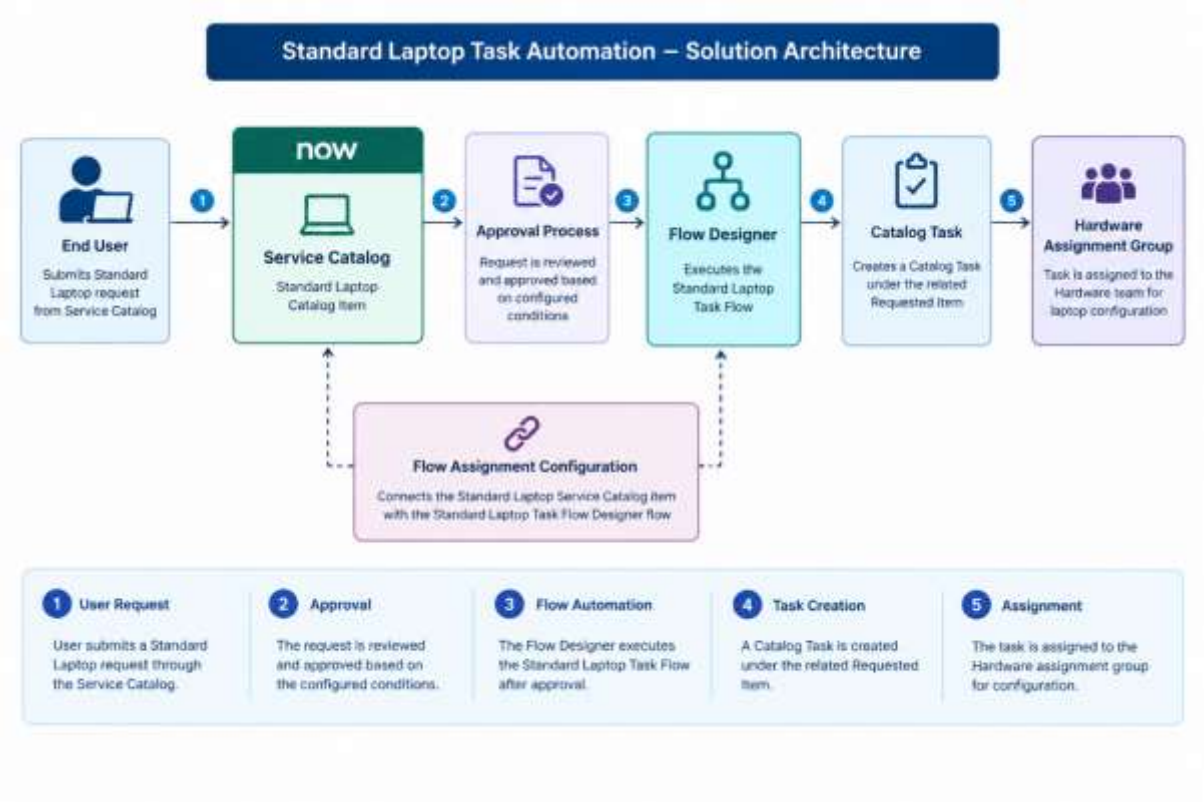

2. Flow Assignment:
The Flow Assignment connects the Standard Laptop Service Catalog item with the configured Flow Designer workflow. This enables automatic task creation and assignment to the Hardware team after approval.

3. Service Catalog:
The Service Catalog allows users to submit Standard Laptop requests. After approval, Flow Designer automatically creates a Catalog Task and routes it to the Hardware team for configuration.

Conclusion: By automating the standard laptop procurement process with ServiceNow's Flow Designer, the project addresses manual task-creation inefficiencies and reduces manual overhead. The streamlined workflow supports timely laptop configuration, reduces user wait times, and improves overall productivity within the IT department. The automated solution also supports efficient resource allocation and provides a more seamless procurement process.
